Identities

$$(AB)^T = B^T A^T \quad (23)$$

$$(A + B)^T = A^T + B^T \quad (24)$$

$$(AB)^{-1} = B^{-1} A^{-1} \quad (25)$$

The determinant of a triangular matrix equals the product of the diagonal entries. Since for any triangular matrix A the matrix $\lambda I - A$, whose determinant is the characteristic polynomial of A , is also triangular, the diagonal entries of A in fact give the multiset of eigenvalues of A (an eigenvalue with multiplicity m occurs exactly m times as diagonal entry)
